Oplim is an innovative and patent-pending web-based solution to improve your web pages. It runs micro-tasks consisting of an action and a condition in your website.

All You Do in Your Webpages Consists of Two Things:

Do **action** when **condition** happens.

This Is Called an Oplimation:

- Disable or enable it with a single click.
- No limit in condition rules and logic (patent-pending innovative visual editor, no skills needed).
- Already integrated with many services (live chats, support systems, analytics, etc.), zero-code.
- Add your own custom JavaScript codes to action or condition if you wish to.
- Duplicate, customize, re-use, archive, or mix Oplimations.
- Insert Oplim Installation Script once, no need to touch any code to enable/disable any functionality.
- Team work on a single website with powerful team sharing features (CEO, devs, and marketers can enable/disable an Oplimation with a single click independently).

Oplim is an innovative and patent-pending web-based solution to improve your web pages. It runs micro-tasks consisting of an action and a condition in your website.

How World Best Companies Utilize Oplim Everyday?

Improve UX

▸ Browser keyboard focus on the starting field automatically on page load.

▸ Hide non-important content if there is no enough space in screen.

▸ Modify styles and content based on visitor view source.

Increase Conversion Rate

▸ Show a discount coupon to undecided buyers.

▸ Open live-chat if visitor is opening a single product page multiple times.

▸ Show localized offers in specific times of year.

Maximize Other Services Value

▸ Control many third-party tools like live-chat and survey widgets, A/B testing, customer success softwares and user behavioural analytics services with millions of conditions.

▸ Use Oplim as a tag manager to enable or disable other services with a single click.

Decrease Expenses

▸ Display and hide offers and discounts automatically and accurately.

▸ Hide live chat for non-potential buyers to save available human resources.

▸ Less developers required as features are managed by Oplim.

Speed-up Development

▸ No programming skills required to design, enable, and disable features.

▸ Simple sharing and team access for enabling/disabling functionalities with a single-click, independently.

▸ Already integrated with many third-parties.

Avoid Errors & Losses

▸ Isolate functionalities in web pages, simpler debugging, archiving, functionality re-use, no need to push any updates to source code.

▸ Avoid complicated codes and conditions, avoid errors and losses.

▸ Zero-maintenance.
